SECTION 2: LOCAL CONTENT AND PRODUCTION

2.1 Introduction

In terms of the Preferential Procurement Policy Framework Act, 5 of 2000 (PPPFA) and the regulations thereto, bids in respect of goods, services or works that have been designated for local production and content, must contain a specific bidding condition that only locally produced goods, services or works or locally manufactured goods with a stipulated minimum threshold for local content and production will be considered. This tender falls within a designated sector and ACSA is therefore required to stipulate the minimum threshold for local production and content. The minimum threshold for local content and production for this tender is _____ of the bid price. Any bidder who fails to meet the minimum threshold for local production and content will be disqualified from the process. To this end, bidders must complete a declaration certificate for local content and production (SBD 6.2) which is Annexure of this tender document. Failure to return a completed SBD 6.2 form will make a bidder liable for disqualification.

2.2 Calculation of local content and production

Local content means that portion of the bid price which is not included in the imported content, provided that local manufacture does take place. Imported content means the portion of the bid price represented by the cost the cost of components, parts or materials which have been or are still imported (whether by the supplier or its sub-contractors) and which costs are inclusive of the costs abroad, plus freight and other direct importation costs, such as landing costs, dock dues, import duty, sales duty or other similar tax or duty at the South African port of entry. The South African Bureau of Standards (SABS) approved technical specification number SATS 1286:201x will be used to calculate local content. The formula to be used to calculate local content is as follows:

$$LC = 1 \left(\frac{x}{y} \right) \times 100$$

Where:

X represents imported content

Y represents bid price excluding value added tax

Prices referred to in the determination of x will be converted to Rand (ZAR) by using the exchange rate published by the South African Reserve Bank (SARB) at 12:00 on the date, one week (7 calendar days) prior to the closing date of the bid.

2.3 Declaration certificate for local production and content (SBD 6.2)

This Standard Bidding Document (SBD) must form part of all invited bids. It contains general information and serves as a declaration form for local content (local production and local content are used interchangeably).

Before completing this declaration, bidders must study the General Conditions, Definitions, Directives applicable in respect of Local Content as prescribed in the Preferential Procurement Regulations, 2011 and the SABS approved technical specification number SATS 1286:201x.

- 2.4.3 Where necessary, for bids referred to in paragraphs 2.4.2, a two-stage bidding process may be followed, where the first stage involves a minimum threshold for local production and content and the second stage price and B-BBEE.
- 2.4.4 A person awarded a contract in relation to a designated sector, may not sub-contract in such a manner that the local production and content of the overall value of the contract is reduced to below the stipulated minimum threshold.
- 2.4.5 A bid will be disqualified if:

SECTION 3: BACKGROUND, PURPOSE AND SCOPE OF WORK

3.1. Background

O.R Tambo International Airport has been experiencing a drop in water pressure in the main water line which is being supplied by Rand Water. This has been observed over the past month. The effect has been in low water pressure being experienced at tenant buildings such as City Lodge Hotel and at some ablution facilities in the airport. The main water supply to the airport is currently experiencing a drop in pressure of 1.2 bar over a distance of 2.5Km. The airport is thus currently not receiving water supply at the required design pressure.

The airport reservoir levels have also been experiencing intermittent drops in water levels which sometimes necessitates emergency feed to maintain the airport water capacity requirements. Investigations have been in progress to identify the fundamental cause of the water supply challenges being experienced at the airport. These include:

- Identifying and investigating overflowing services such as manholes near the airport to identify leaks which may be influencing the pressure drop.
- Conducting visual inspections along the affected pipe sections. A major leak was detected in the Rhodesfield area, in close proximity to the airport main water supply line. Upon engagement with Ekurhuleni Municipality, it was advised that the major leak (later repaired by Ekurhuleni Municipality) was not linked to the airport supply.

3.2. Required Services

A service provider is required to:

- 3.2.1.** Conduct leak detection testing, making use of appropriate equipment and trained personnel to manage the testing process, analyze results and make recommendations. A thorough visual inspection is required prior to commencement of the testing. The testing process and the analysis of results will enable the service provider to identify whether leaks are present and the sections which are affected. The service provider is required to make a detailed recommendation on corrective action to be implemented for both sites. The affected sites are as follows:

- 2.5Km of pipe length which is located under the R21 freeway. Works will be required during the day and night. The works are anticipated to take 24 hours to conclude.
- Main reservoir located at O.R Tambo International Airport. The complete testing is estimated to take 2 weeks to conclude.

Video recordings and photos at specified locations will be required with detailed explanations of the flow patterns.

3.2.2. Quantify the volume of water leaving and entering the main reservoir which will be measured over a specified time period. After concluding the study the service provider is to advise on the reasons for the level of water in the reservoir dropping intermittently. The service provider must advise whether there is a leak in the reservoir, the location and the corrective actions. Appropriate recommendations are to be in place for all findings.

3.2.3. Advise whether the reduced water pressure on the main water line has been influencing the drop in water levels at the main reservoir.
